

The Atlas Copco logo is positioned in the top right corner of the image. It consists of the brand name "Atlas Copco" in a white, serif font, centered between two horizontal white bars. The background of the logo is a solid teal color.

Atlas Copco

A technical drawing is overlaid on the bottom left of the image. It is a white line drawing on a teal background, showing a cross-section of a mechanical component. The drawing includes various dimensions and labels such as "1630 T64 Z1", "1350 T64-31", "C-C(1:3)", "Ø72", "Ø78", "Ø70", "10.5", "18.5", "30.5", and "41.8".

Tensor Revo nutrunners

A revolution in high-torque tightening
- Now up to 4000 Nm!

SMARTER, LIGHTER AND FASTER

When choosing assembly tools for high torque joints, the challenge is often to combine high quality tightening with acceptable ergonomics and usability. Some tools provide higher quality but can be large and heavy. Other tools are lighter, but may not live up to quality and durability requirements. Why compromise? Tensor Revo has it all. It's also extremely fast. With the unique, patented T-design and packed with smart features, the new Tensor Revo is a true revolution in high torque tightening.

“It's a pleasure to work with the new Tensor Revo! Compared with our old LTP pistol-grip, the Tensor Revo is very quiet and more comfortable to work with. I can finish the job faster and we only need to use one tool instead of two.”

Mikael Haglund, Volvo Construction Equipment

“I appreciate the new Tensor Revo since it is so fast and light which is important in terms of productivity and ergonomics.”

Dirk D. Walther, Maintenance Engineer, Daimler

Cylinder head assembly.

Wheel assembly.

Cab to body and ROPS.

Chassis and axle assembly.

Counterweight assembly.

Smarter – for highest quality

Error proofing: High accuracy and full rundown control eliminates assembly errors and ensures process stability.

Full traceability: Transducer measured torque ensures a traceable process. Easily combined with data collection software.

Clear feedback: Visual and audio feedback allows operator to correct errors at source.

Lighter – for highest usability

50% lighter and 40% more compact: Improves ergonomics and simplifies access and installation.

Easy positioning: 360° gear swivel on transducerized tool enables easy positioning and access to bolt.

Simpler process: Quick and easy program change directly on tool.

Faster – for highest productivity

Higher speed: 99 rpm at 1,000 Nm. 30% faster compared to Tensor S9.

Less rework: Find and correct problems directly at source to reduce time for rework.

Fewer operations: Replace pneumatic tool and click wrenches with only one Tensor Revo operation.
